(54) Title: MOULDING ELEMENT FOR MOTOR VEHICLE BODIES AND METHOD FOR THE REALISATION THEREOF

(57) Abstract

A moulding element for motor vehicle bodies has been realised wherein a main section bar (2) of elongated conformation is engaged to attachment projections (9) presented by a correspondent securing area (5a) of a body (5) of a motor vehicle. The engagement between main section bar (2) and body (5) occurs by means of the interposition of a continuous support element (7) presenting a pre-set number of seats (11) able to be engaged to a pre-set number of fastening projections (9) of the body.
